

Identify faulty ballasts on bi-pin light fixtures!

Take the guess-work out of identifying lighting problems on bi-pin fluorescent fixtures with the Magnetic Bi-Pin Ballast Tester from GTi products. With the Magnetic Ballast Tester, you can rule out other lighting problems like a burned-out or damaged bulb and a damaged or broken fixture. A simple, two-step test gives the user instant results. No diagnostics to decipher, no leads to connect. It's an easy test to check rapid ballast for proper filament voltage on bi-pin fixtures.

Product Specifications:

Bi-Pin Magnetic Ballast Tester

Model No: BT-MAG1

Types of fixtures tested: F17T8, F25T12, F30T12, F32T8, F40T10, F40T12

Here's how it works:

Remove bulb from fixture. Install the Magnetic Ballast Tester into the bi-pin connector at each end of the light fixture. If the LED lights on both sides, the ballast is OK. If only one side lights, the fixture is bad. If the LED doesn't light on either side, the ballast is faulty

Product Features:

- Simple, easy-to-perform test
- Identifies defective ballasts on bi-pin light fixtures
- Small enough to carry in tool belt or pocket
